SeGRP One Piece Tanks

MWT GRP One Piece Tanks have been specifically designed to meet the stringent requirements of BS EN 13280 : 2001.

They are fully tested and approved for current water regulations, these tanks have been specified throughout the UK by County and District Councils, Consulting Engineers and Architects.

They are light in weight, easily handled and resistant to corrosion and attack from bacteria which may normally be expected in cold water systems.

GRP is easily cut and drilled with ordinary plumbers tools. We can also manufacture standard specialist tanks for storing a wide range of chemicals.

Tanks can be manufactured in our standard grey colour or to a specific RAL colour as per the customers requirements, popular options are British Racing Green and Blue.

Pre-Insulated GRP One Piece Tanks

Pre-insulated tanks protect contents from extremes of heat and cold, thereby reducing excessive temperature fluctuations which increase the risk of bacteria growth.

To restrict microbiological growth the temperature in the tank should be kept as low as possible and below 20 °C.

Insulation is available in either 25mm, 50mm, 75mm or 100mm expanded CFC free polyurethane foam encapsulated in both the lid and tank sides. Tanks supported on a flat base do not normally require insulation underneath.

Standard positioned pre-formed cutouts to accommodate tank connections and fittings are provided on all special and standard tanks. If required, we can position the cutouts to the customers specification.

MWT standard Rigid One Piece tanks can be supplied in Metric and Imperial sizes from 10 - 11,250 Gallons or 45 - 90,000 Litres. Special sizes and shapes including irregular shapes such as 'L' shaped or tapered tanks and cisterns can also be manufactured to customers own requirements and specification.

SeGRP One Piece Tanks

Semi Sectional Tanks

Semi-sectional cisterns can be used as an alternative to the conventional sectional types of tanks, saving expensive installation costs as these tanks can easily be erected by yourselves

Semi Sectional Tanks are mainly for restricted access situations where they can be a very cost effective alternative compared to a fully Sectional Tank.

These tanks are Two Piece tanks with a horizontal joint. The tank can then be passed through a doorway allowing them to be easily assembled on the other side.
All of our Semi Sectional tanks come complete with nuts, bolts, washers and sealer .
