For underground water storage requirements our wide range of waste water, rain water harvested and potable water storage tanks provide the solution.

Manufactured from Glass Reinforced Polyester with a cylindrical design these below ground water holding tanks come with a wide range of size and capacity with the option for concrete on granular surround.

Standard equipment:
$1 \times 600 \mathrm{~mm} \times 1000 \mathrm{~mm}$ Access manway
1 x Inlet, outlet \& overflow
1 x Lockable pedestrian cover \& frame

Other equipment include:
additional turret, access ladders, filtration and pumping solutions.

Standard tanks are available in capacities from $1 \mathrm{~m}^{3}$ (220 UK gallons) to $275 m^{3}$ (60,500 UK gallons) and in diameters from 1.0 m to 4.0 m and lengths from 1.4 m to 22.5 m . The volume of storage can be increased further by interconnecting tanks onsite.
